THE FOUR KEY CONTACT POINTS

Please take all measurements in cm

A. SADDLE HEIGHT

Measure from the center of the bottom bracket to the top-center of the saddle.

B. SADDLE SETBACK

This is best measured with a plumb bob (any long string with a weight on it will do). Place the string on the tip of the saddle and drop the weight below the bottom bracket. After it steadies, measure horizontally from the string to the center of the bottom bracket.

C. REACH

Measure from the tip of the saddle to the top-center of the bars.

D. HANDLEBAR DROP

Measure vertically from the top of the saddle to the ground. Then measure vertically from the top-center of the bars to the ground. Subtract the second measurement from the first.

BODY INFO

WEIGHT

AGE

Please take all measurements in cm

A. HEIGHT

B. TOTAL BODY LENGTH

Your sternal notch is the notch at the base of your neck. Stand up straight with your feet at shoulder width. Measure from your sternal notch to the floor.

C. INSEAM

Still standing with your feet shoulder width apart, hold a book between your legs and parallel to the ground. Pull the spine of the book up into your perineum with the pressure of a saddle. Measure from book's spine to the ground. Check this measurement a couple of extra times, it is the most difficult to take accurately.

D. ARM LENGTH

Your acromion process is the outermost bone in your shoulder. Hold onto a pen and hold your arm as straight as possible at a 45° angle. Measure from the acromion process to the pen.

E. SHOULDER WIDTH

Measure from one acromion process to the other.
